

Anthony Stiles

Senior Software Developer

Email: anthony.stiles.developer@gmail.com
Telephone: 07917611054
Website: www.anthony-stiles.com
Location: Birmingham (happy to relocate)

Senior Software Developer with First Class degree and 7+ years' experience in building and scaling enterprise-level .NET web applications in the automotive industry. Proven experience in API design and architecture delivering payment integrations and core business changes. Solid track record in UI framework creation and maintenance specialising in validation.

Experience

Pinewood.AI, Birmingham

July 2022 - Present	Senior Software Developer
May 2020 - July 2022	Graduate / Software Developer
June 2018 - May 2020	Placement Student

Main Technologies

- C#
- .NET 9
- JavaScript (Vanilla, jQuery)
- Web API
- Razor Pages
- React
- SQL / T-SQL
- HTML
- Git

- Senior software developer in the Platform team where I work on an enterprise level, International and multidisciplinary automotive dealership platform using a Microsoft tech stack and hosted in Azure. We follow agile practices and release changes for multiple products daily.
- **Integrated Credit Card Payments**
 - Designed and developed a provider agnostic integrated card payment system supporting Bumper, FreedomPay and Verifone.
 - Built .NET APIs leveraging factory and strategy patterns to implement provider specific logic alongside our system requirements.
 - Updated SQL table schema and Stored Procedures to record and retrieve new data.
 - Base routines such as processing payments, refunds and cancellations to store generic system data.
 - Platform specific routines to call external endpoints and update data from responses including optional functionality such as verbal authorisation and signature verification where applicable.
 - Implemented a Webhook with request signing to receive payment information from an external provider to update our records.
 - Consumed APIs and implemented a polling system in a Razor Pages web application as well as a Xamarin / MAUI mobile application.
 - Passed an accreditation process for FreedomPay.
 - Supported the implementation team by providing parameter information where required and monitoring issues via Azure application insights.

- **Razor Pages Control Framework**

- Email Address Validation
 - Created a validation attribute in a Razor Pages application using jQuery Unobtrusive Validation to override and improve the regex detection on email domains.
 - Implemented client side validation using web requests via JavaScript to validate the email domain using Google DNS lookup.
 - Implemented a filter to cover asynchronous server side validations.
- File Upload Validation
 - Client and server implementations for file extension / mime type and size.
 - Created middleware to validate files during upload by calling an external web service.
- Control Functionality / Page Templates
 - Added edit and drag and drop functionality to a tree control using Javascript.
 - Added functionality to a table Tag Helper to show a message when no data is available.
 - Created a planner page template (similar to the Outlook scheduling assistant tool) using a base page model, Tag Helper and Javascript.
 - Worked on multiple reporting templates consisting of base page models and Tag Helpers.

- **Workshop Discounting**

- Developed a system to allow discounting of operations performed during a workshop job and adjusted values on invoices and accounts postings.
- Implemented new SQL tables including link tables to create discounts and assign them to operations.
- Created a new set of .NET APIs to handle CRUD operations for discounts and modified existing APIs. Modifications included considering discounts in applicable calculations including tax, adjusting accounts postings based on business rules and invoice generation adjustments.
- Consumed APIs by creating CRUD operation screens for discounts, providing means to apply a discount on operation screens when business rules allow and displaying the discount where applicable.

- **OEM Part Imports**

- Lead work to support the OEM team in creating new versions of existing part import routines.
- Added OEM specific logic to a large and complex C# framework implementing factory, strategy and template patterns.
- Collaborated with the OEM team to understand the framework to allow me to guide junior developers through the process to ensure project completion within the target date.

Qualifications

2020

Bachelor of Science with Honours in Computer Science (First Class)
Birmingham City University

2016

BTEC Level 3 Extended Diploma in Information Technology (Distinction)
Birmingham Metropolitan College (Stourbridge)

Personal Projects

- **Personal Website**

- Built a website using React and Typescript with Next.js.
- Implemented bespoke reactive CSS by taking a mobile first approach.
- Created a functioning contact system with validation using Zod and spam protection using reCAPTCHA.
- Managed domain configuration and deployment via Vercel, with automated updates triggered by git commits.

- **Invoice Generator iOS App**

- Built a mobile app using .NET MAUI for PDF invoice document generation and released on the App Store.
- Used an SQLite database with SQLCipher accessed with Entity Framework Core to store invoice data.
- Utilised MigraDoc for document generation.
- Used preference and secure storage APIs, created behaviours to manage user input such as bank sort codes.
